**Primary Examiner**

The following is an examiner's statement of reasons for allowance: The prior art fails to teach a differential pixel detector and its method, among other features, comprising a first and a second photodetector, each with an associated capacitor for directly integrates photocurrent generated by the associated photodetector during an integration time, respectively; means for forcing potential on each capacitor to a fixed voltage potential before the start of the integration; and means for resetting the potential during integration time before the potential attains a saturation voltage associated with the detector so that a desired differential pixel detector signal is determinable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

I) Kindt 6,635,857 discloses a method and apparatus for a pixel cell architecture having photocurrent integration with a controller.
